1st strand cDNA was primed with a NotI-oligo(dT) primer: Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           10

/lab_host="DH10B TonA"

/clone lib="NIH MGC_252"

two days before RNA obtained from female overies animals at 8 wk old. Tissues were snap-frozen and kept at -80C for two days before RNA extraction and purification

(Tri_reagent method). cDNA was primed using oligo-dT primer: 5'-pGACTAGTTCTAGATCCCGAGCCCCC(T).25-3' and cloned into the EcoRV/Not1 sites of pExpress-1.

Size-selection >1.25bb resulted in an average insert size of 1.7kb. This primary library is not normalized (normalized library is not normalized by cormalized in a supersylate of the state of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              231

/notes "Vector: pCMV-SPORT6 (Invitrogen); Site 1: Sall;
Site 2: Noti, Mouse cDNA project by the Laboratory of
GeneTics, National Institute on Aging (NIA), Intramural
Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA).
This is a long-transcript enriched cDNA library (Ref.
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total
RNAs were obtained from Dr.Mark G. Carter (NIH/NIA-IRP).
EG cells were cultured at 37. C, 5% CO2 in DMEM
supplemented with 15% ES cell-qualified FBS, 0.1mM
non-essential amino acids, 2 mM glutamine,
penicillin/streptomycin, 1 mM sodium pyruvate, 0.1 mM
beta-mercaptoethanol, and 10000000 units of LIF per liter.
Double-stranded cDNAs: were synthesized with an Oligo(dT)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /db_xref="niaEST:B0281B08-5"

/note="Organ: Brain; Vector: pYX- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel. First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pYX-Asc vector. The library teg
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
lowa Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel isolated nucleic acid molecule identified as PRSS11-L that encodes an $2 serine protease. Specifically, it refers to members of the $2/HtrA serine protease family, such that it plays a role in cellular physiology and apoptosis. The present invention provides agonists, antagonists, antibodies and recombinant expression vectors useful in methods of treatment, or detection and diagnosis of diseases associated with the aberrant expression or activity of the $2 serine protease, PRSS11-L. Accordingly, compositions described herein can be used via gene therapy routes to treat osteoarthritis, stress and apoptotic disorders. As such, they exhibit osteopathic, antiarthritic and tranquiliser activities. This polynucleotide sequence is the human PRSS11-L CDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 3006 BP; 615 A; 918 C; 911 G; 562

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepaatotropic; antidiabetic;

nootropic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antifungal; antiparasitic and cardiant activity. The polymucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular diseases such as myocardial ischaemias; wound healing; neurological diseases such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14-AUG-2001; 2001US-0312147P.
